

CASE STUDY

Right-sizing of forklift fleet
and mapping of operational
bottlenecks in loading bay

BRITISH SUGAR (UK)

Formed as the British Sugar Corporation in 1936, when the British parliament nationalised the entire sugar beet crop processing industry, under the banner of British Sugar Corporation. At this time, there were 13 separate companies with 18 factories across the country. In 1972, it began selling its sugar products under the name of Silver Spoon.

THE PROBLEM

With an increasing number of distribution networks, the loading bay of the British Sugar unit in Bury St Edmunds, traffic congestions became increasingly worrying. Forklift fleet grew disproportionately in an attempt to respond to demand aggravating the problem. Correctly mapping the area, adjusting the fleet size, and implement, and enforcing, routing compliance became a necessity to maintain healthy operations on the site.

THE SOLUTION

- Clearer order handling process
- Restricted zones for forklift only operations

PROJECT SNAPSHOT

574.56m2	Area covered
16	Stationary sensors
3	Forklifts tracked
1 days	Time to data
